~~~~~How to run Functional Testing~~~~~

We chose to work with Firefox for this portion of the testing.

1. - Download Mozilla Firefox
2. - Download Selenium IDE (<http://docs.seleniumhq.org/download/>)
3. - Download project and open terminal (CMD) and change directory to our project.
4. - Run Rails Server (Look in GitHub Repository under README file for steps)
5. - Launch our site (<http://localhost:3000>)
6. - Navigate to the Functional testing folder link
7. - Open our tests in Selenium IDE and that is it!
